

1. Introduction

Typst is a *markup-based* typesetting system that is **powerful** and easy to learn.

1.1 Math Mode

Unlike LaTeX, you don't need backslashes for everything. Inline math looks like this: $A = \pi r^2$.

Block math is centered automatically if you add spaces:

$$F(x) = \int_0^{\infty} e^{-x} \, dx$$

1.2 Scripting

You can use variables and functions using the `#` symbol.

Hello, Typst User!
